ABSTRACT:

Utilization of the E-Metro Community and Personal Information Agents assure an effective and comprehensive agent-rule based command and control of informational assets in a networked computer environment. The concerns of informational privacy and informational self-determination are addressed squarely by the invention affording persons and entities a trusted means to author, secure, search, process, and exchange personal and/or confidential information in a networked computer environment. The formation of trusted electronic communities wherein members command and control their digital persona, exchanging or brokering for value the trusted utility of their informational assets is made possible by the invention. The present invention provides for the trusted utilization of personal data in electronic markets, providing both communities and individuals aggregate and individual rule-based control of the processing of their personal data.

DOCUMENT-IDENTIFIER: US 5987440 A

TITLE: Personal information security and exchange tool

Detailed Description Text (158):

The processing of Orders is interesting because most will be canceled eventually. However, totally adhoc order fulfillment is possible if the OrderProcessor is coded to allow it. For example, it could allow the auctioneer to examine the Order history. The auctioneer could decide at any time to extend the time of the auction, cut it short, fulfill the non-highest bid (order), fulfill multiple bids (order), or cancel all bids (orders). The behavior of the auction is governed by the OrderProcessor.

ART-UNIT: 3628

PRIMARY-EXAMINER: Pwu; Jeffrey

ATTY-AGENT-FIRM: Skadden, Arps, Slate, Meagher & Flom LLP

ABSTRACT:

A method and system for dynamic combinatorial auctions employing bid composition restrictions is disclosed. Three exemplary types of bid composition restrictions, which may be applied either singly or in combination, are disclosed: non-additive activity restrictions, subset restrictions, and superset restrictions. These restrictions produce more efficient auction outcomes by placing extra constraints on bidders who specify larger combinations in their bids, thereby penalizing attempts at strategic bidding without ruling out genuine attempts to avoid an exposure problem.
